

Check-in (5-15 minutes)

The receptionist at the front desk will be checking you in, making sure all of your paperwork is filled out and checking your insurance. If you are a new patient, your check-in will be much more timely and efficient if your paperwork has already been filled out and you have sent us a copy of your insurance card(s).

Diagnostic Testing (~ 20 minutes)

The technician will escort you to an exam room. They will review your medical history, check your vision, perform a refraction to obtain your prescription, assess your eye pressure, and dilate your eyes

Dilation (~15 minutes)

The technician will escort you to the dilating area where you will wait for 15-20 minutes for the dilation to kick in. Once you are fully dilated, the technician will take you back to the exam room.

Dilation lasts for 4-5 hours in total. You will notice a decrease in your near vision and an increased sensitivity to light during this period.

With your sunglasses or the shades we provide you with at the front desk, you will be able to drive home once your exam is completed.

Doctor Visit

The doctor will check inside of your eyes with a special lens to make sure there are no retinal conditions and that your eyes are healthy. They will answer any questions or concerns you may have about your eyes.
